MARKETABLE PHOSPHATE ROCK IN APRIL 1997

U.S. marketable phosphate rock production in April 1997 increased about 2% compared to the prior month, according to the U.S. Geological Survey (USGS). Annualized production thus far in 1997 was calculated to be 46.5 million metric tons, which was about 6% higher than the total 1996 production of 43.8 million tons (Table 3).

Domestic phosphate rock sold or used, excluding exports for April, decreased about 4% compared to the prior month, to 3.4 million tons. Annualized sales or use thus far in 1997 was calculated to be 40.9 million tons or about 3% less than the total for 1996 (Table 3).

U.S. producer ending stocks for April increased about 5% compared with March. In the Florida-North Carolina region,

stocks were about 8% higher, while in the Idaho-Utah region, stocks were 5% lower than the previous month.

Some phosphate rock import data for Morocco are suppressed by the Bureau of the Census; total U.S. import tonnage was estimated by USGS to average 150,000 tons per month, or 1.8 million tons per year. April import data were not available at the time of publication.

Annualized domestic consumption for 1997 was calculated to be 41.4 million tons using annualized sold and used data and estimated trade data. Apparent domestic consumption for 1996, calculated from the sum of home deliveries and adjusted import data, was 43.9 million tons per year, compared with 42.6 million tons in 1995.
